

Composite Solutions Made **Green** and Renewable!

Introducing Engineered Core, Backer and Deco Sheet Stock
Delivers beauty, strength and high design functionality.
Offers shape for almost free!

Lenderink

Fold OR Mold Sheet Stock

Imagine. One Material Delivering All This.

Fold it. Bend it. Shape it. Model it. Print it.
Mold it. Machine it. Laminate it. Recycle it.

**All types of products.
Unlimited possibilities.**

Fold or Mold Sheet Stock is opening broad new areas of innovation to designers, model makers, and craftsman as well as component manufacturing (i.e. packaging, furniture, partitions, auto, aircraft and exhibition/point of purchase display).

Fold or Mold is easily bent, folded, curved, scored or creased to create strong 3D parts. Fold or Mold is the newest cost-effective, green choice (some formulations over ninety % from recycled plastics) for containers, suitcase cores, or even lamp shades (translucent applications). Fold or Mold molds for 3D components that can be made by hand or in low cost presses as only low pressures are needed to create shapes.

Fold or Mold rigid backer/engineered core is the future of strong, functional, environmentally green, high end 3D. Many constructions of this composite are available with different fibers or scrims added into the sheet for different end uses. This flexibility can deliver different molded looks and strengths. (Fire retardancy is available.) Fold or Mold is easily molded to virtually any shape when heated to "GT". Surfaces can be overlaid, printed, embossed or laminated with deco wood, tiles or fabrics. Adhesives and plastic coatings are also available.

Lenderink **Fold OR Mold** Sheet Stock

Composite Solutions

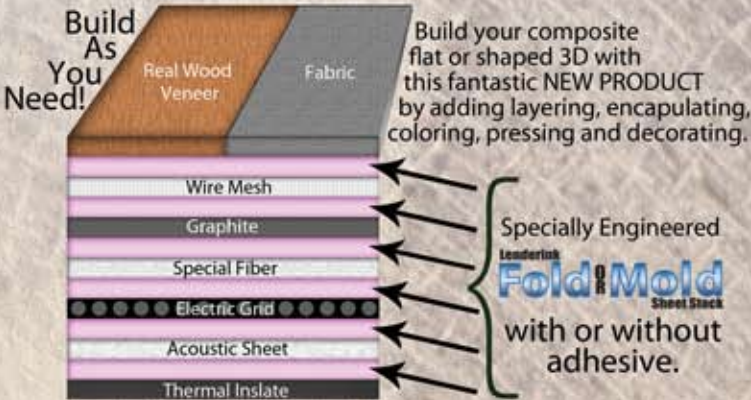

Think it. Shape it.

- Easily molded, folded, bent or curved when heated to "GT"
- Low cost, strong substantial components
- Weight densities - you select
- Easily cuts
- Smooth, tight edges, good screw hold, no cracking or splitting
- Color, density, translucency, and edge - you select
- Available large sheet sizes to small cut-to-size pieces, no rough cut
- Whole piece, no void/no holes, square cuts
- Architectural grade for doors, panels, inserts
- Fire retarded (Class A available)
- Eco-friendly, certified GREEN
- Printable
- Easy bonding "adhesive" on one or two sides
- Low cost filler, outer or backer
- Moisture resistant
- Perforates for acoustic qualities
- Emboss, Score
- Holds thumb tacks (tack boards/partitions)

You and the innovative design professionals at Lenderink Technologies can do amazing things with our Engineered Core, rigid backers and deco overlay.

Additional Lenderink Solutions

- Exact quality - every piece!
- Engineered density and screw hold
- Excellent flatness, managed internal bond, M.O.E., M.O.R.
- Various surface tensions and friction coefficients available
